**Roll-a-Flex® is the flexible, fully reinforced, weld-free alternative for creating waterproof joints and seals on any non aluminium roofing material, profile or surface finish. Use it on hips, valleys and other details which require redevelopment of the roof system.**

Introduced for the 21st Century, **Roll-A-Flex** is the latest in a long line of innovative solutions from M.R. Site Services. It has taken the UK roofing industry by storm and is fast becoming the standard option for non-aluminium roofs.

**Roll-A-Flex** is used on all types of roof, including extruded or formed aluminium, steel and concrete.

**Roll-A-Flex** is exceptionally durable and will not crack as the roof flexes. It is fully waterproof within 25 minutes and can be walked on within 45 minutes.

**Roll-A-Flex** offers first-class fire-resistance: it is applied cold so there is no risk of combustion to surrounding insulation.

**Roll-A-Flex** can also be coloured to match existing materials.

- Part of the renowned **Quantum** range of products
- Seamless, watertight joints
- Suitable for all types of roof and profile
- Fully flexible: allows for movement in the roof
- First-class fire resistance
- Chemical and UV resistant
- Applied by fully trained, skilled engineers
- Certified and approved in Europe and the UK
- Manufactured to ISO 9001
- Workmanship and materials fully guaranteed
